

FUNCTIONAL AND NON FUNCTIONAL REQUIREMENTS

Request ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	Guests can select time slots for the interview and submit bullet points along with biographic links	High	Slot is booked, calendar invite is sent and fails if booking is allowed on blocked dates	Core booking function
FR-002	Functional	The system sends an automated date for confirmation as a calendar invite to the guest immediately after a slot is booked	High	Within 30 seconds of booking, the guest receives an email containing the date, time and a calendar attachment	Prevents scheduling conflicts
FR-003	Functional	Once the booking is successfully made, calendar invites are sent	High	All the recipients can check the date and time of the podcast along with any notes comfortably	Allows recipients to access the invites easily
FR-004	Functional	The guest can also edit the bullet points and biography links within 24 hours before the due date	Medium	This means that the guest can edit the outline through a user friendly UI in case of any errors	The guest can make edits in case of any issues, without any hassle. This is an important and often overlooked function.
FR-005	Functional	The system creates a list of guest outlines for the host and prepares a time stamped production sheet	High	The host can click "generate" and a document is produced listing each	Produces the host's on ai reference document

				segment with guest name, slots and topic bullets in order	
NFR-001	Non Functional	Outline generator compiles a formatted PDF in under 1 second	Medium	Benchmark tests confirm target latency and security under simulated peak load	-
NFR-002	Non Functional	The system shall let a guest complete a full booking in no more than 3 user interactions	Medium	Usability test confirms ≤ 3 taps/clicks for 95% of test users	Minimizes drop-off for busy guests who won't fight a clunky form
